

# CS 161A: Programming and Problem Solving I

## Assignment A02 Algorithmic Design Document

---

Make a copy before you begin (File -> Make a copy). Add the Assignment # above and complete the sections below **BEFORE** you begin to code. The sections will expand as you type. When you are finished, download this document as a PDF (File -> Download -> PDF) and submit to D2L.

This document contains an interactive checklist. To mark an item as complete, click on the box (the entire list will be highlighted), then right click (the clicked box will only be highlighted), and choose the checkmark.

Planning your program before you start coding is part of the development process. In this document you will:

- ☐ Paste a screenshot of your zyBooks Challenge and Participation %
- ☐ Paste a screenshot of your assigned zyLabs completion
- ☐ Write a detailed description of your program, at least two complete sentences
- ☐ If applicable, design a sample run with test input and output
- ☐ Identify the program inputs and their data types
- ☐ Identify the program outputs and their data types
- ☐ Identify any calculations or formulas needed
- ☐ Write the algorithmic steps as pseudocode or a flowchart
- ☐ Tools for flowchart - [Draw.io](https://draw.io) - [Diagrams.net](https://diagrams.net)

### 1. zyBooks

---

Add your zyBooks screenshots for the % and assigned zyLabs completions below. Required percentages: all **assigned** zyLabs, Challenge Activity with at least 70%, and Participation Activity with at least 80%.

#### Challenge and Participation % screenshot:

#### Assigned zyLabs completion screenshot:

<input type="checkbox"/>	2.12 Assignment Sample		
<input type="checkbox"/>	2.13 LAB: Caffeine levels	100%	▼
<input type="checkbox"/>	2.14 LAB: Divide input integers	100%	▼

## 2. Program Description

In the box below, describe the purpose of the program. You must include a detailed description with at least two complete sentences.

### Program description:

This program will calculate your week's paystub and outline that various withholding from it. Entering in your employee number, hours worked this week, and your hourly wage, you will see a detailed summary of your paystub.

## 3. Sample Run

If you are designing your own program, you will start with a sample run. Imagine a user is running your program - what will they see? What inputs do you expect, and what will be the outputs from the given inputs? Choose test data you will use to test your program. Calculate and show the expected outputs. Use the sample run to test your program.

### Sample run:

```
Welcome to my Weekly Payroll program!!
Enter your employee ID number (numbers only): 17018
Enter number of hours worked (whole numbers): 64
Enter the hourly rate: 38.626426154721613437
Enter the federal withholding rate: 15.9476916432761
```

```
Your Payroll Summary:
Total Gross Pay: $2472.09
FICA deductions: $189.11
Federal Tax Withholding: $394.24
Total deductions: $583.36
Net Pay: $1888.73
```

```
Thank you for using my Weekly Payroll program!!
```

```
Welcome to my Weekly Payroll program!!
Enter your employee ID number (numbers only): 17018
```

```
Enter number of hours worked (whole numbers): 40
Enter the hourly rate: 39.99
Enter the federal withholding rate: 14.95
```

```
Your Payroll Summary:
Total Gross Pay: $1599.60
FICA deductions: $122.37
Federal Tax Withholding: $239.14
Total deductions: $361.51
Net Pay: $1238.09
```

```
Thank you for using my Weekly Payroll program!!
```

## 4. Algorithmic Design

Before you begin coding, **you must first plan out the logic** and think about what data you will use to test your program for correctness. All programmers plan before coding - this saves a lot of time and frustration! Use the steps below to identify the inputs and outputs, calculations, and steps needed to solve the problem.

### Algorithmic design:

a. Identify and list all of the user input and their data types.

Int emplID

Int numHours

Double wageHour

Double rateWithhold

b. Identify and list all of the user output and their data types.

Double payGross

Double deductionFICA

Double deductionFederal

Double deductionTotal

Double payNet

c. What calculations do you need to do to transform inputs into outputs? List all formulas needed, if applicable. If there are no calculations needed, state there are no calculations for this algorithm.

```
payGross = numHours * wageHour  
deductionFICA = payGross * (FICADEDUCT / 100)  
deductionFederal = payGross * (rateWithhold / 100)  
deductionTotal = deductionFICA + deductionFederal  
payNet = payGross - deductionTotal
```

d. Design the logic of your program using pseudocode or flowcharts. Here is where you would use conditionals, loops or functions (if applicable) and list the steps in transforming inputs into outputs. Walk through your logic steps with the test data from the assignment document or the sample run above.

```
START  
  
DECLARE Int empID  
DECLARE Int numHours  
DECLARE Double wageHours  
DECLARE Double rateWithhold  
DECLARE Double payGross  
DECLARE Double payNet  
DECLARE Double deductionFICA  
DECLARE Double deductionFederal  
DECLARE Double deductionTotal  
DECLARE Const Double FICADEDUCT = 7.65  
  
SET setprecision (2), fixed
```

```
DISPLAY "Welcome to my Weekly Payroll program!!"
```

```
DISPLAY "Enter your employee ID number (numbers only): "
```

```
INPUT empID
```

```
DISPLAY "Enter number of hours worked (whole numbers): "
```

```
INPUT numHours
```

```
DISPLAY "Enter the hourly rate: "
```

```
INPUT wageHour
```

```
DISPALY "Enter the federal withholding rate: "
```

```
INPUT rateWithhold
```

```
SET payGross = numHours * wageHour
```

```
SET deductionFICA = payGross * (FICADEDUCT / 100)
```

```
SET deductionFederal = payGross * (rateWithhold / 100)
```

```
SET deductionTotal = deductionFICA + deductionFederal
```

```
SET payNet = payGross - deductionTotal
```

```
DISPLAY "Your Payroll Summary:"
```

```
DISPLAY "Total Gross Pay: $" + payGross
```

```
DISPLAY "FICA deductions: $" + deductionFICA
```

```
DISPLAY "Federal Tax Withholding: $" + deductionFederal
```

```
DISPLAY "Total deductions: $" + deductionTotal
```

```
DISPLAY "Net Pay: $" + payNet
```

```
DISPLAY "Thank you for using my Weekly Payroll program!!"
```

```
END
```

## 5. Pseudocode Syntax

Think about each step in your algorithm as an action and use the verbs below:

To do this:	Use this verb:	Example:
Create a variable	DECLARE	DECLARE integer num_dogs
Print to the console window	DISPLAY	DISPLAY "Hello!"
Read input from the user into a variable	INPUT	INPUT num_dogs
Update the contents of a variable	SET	SET num_dogs = num_dogs + 1
<b>Conditionals</b>		
Use a single alternative conditional	IF <i>condition</i> THEN <i>statement</i> <i>statement</i> END IF	IF num_dogs > 10 THEN DISPLAY "That is a lot of dogs!" END IF
Use a dual alternative conditional	IF <i>condition</i> THEN <i>statement</i> <i>statement</i> ELSE <i>statement</i> <i>statement</i> END IF	IF num_dogs > 10 THEN DISPLAY "You have more than 10 dogs!" ELSE DISPLAY "You have ten or fewer dogs!" END IF
Use a switch/case statement	SELECT <i>variable or expression</i> CASE <i>value_1</i> : <i>statement</i> <i>statement</i> CASE <i>value_2</i> : <i>statement</i> <i>statement</i> CASE <i>value_2</i> : <i>statement</i> <i>statement</i> DEFAULT:	SELECT num_dogs CASE 0: DISPLAY "No dogs!" CASE 1: DISPLAY "One dog.." CASE 2: DISPLAY "Two dogs.." CASE 3: DISPLAY "Three dogs.." DEFAULT: DISPLAY "Lots of dogs!" END SELECT

	<i>statement</i> <i>statement</i> END SELECT	
<b>Loops</b>		
Loop while a condition is true - the loop body will execute 0 or more times.	WHILE <i>condition</i> <i>statement</i> <i>statement</i> END WHILE	SET num_dogs = 1 WHILE num_dogs < 10 DISPLAY num_dogs, " dogs!" SET num_dogs = num_dogs + 1 END WHILE
Loop while a condition is true - the loop body will execute 1 or more times.	DO <i>statement</i> <i>statement</i> WHILE <i>condition</i>	SET num_dogs = 1 DO DISPLAY num_dogs, " dogs!" SET num_dogs = num_dogs + 1 WHILE num_dogs < 10
Loop a specific number of times.	FOR <i>counter</i> = <i>start</i> TO <i>end</i> <i>statement</i> <i>statement</i> END FOR	FOR count = 1 TO 10 DISPLAY num_dogs, " dogs!" END FOR
<b>Functions</b>		
Create a function	FUNCTION <i>return_type</i> <i>name (parameters)</i> <i>statement</i> <i>statement</i> END FUNCTION	FUNCTION Integer add(Integer num1, Integer num2) DECLARE Integer sum SET sum = num1 + num2 RETURN sum END FUNCTION
Call a function	CALL <i>function_name</i>	CALL add(2, 3)
Return data from a function	RETURN <i>value</i>	RETURN 2 + 3
